## Moving Through Life

### Finding the Pleasure in Exercise

Sonia Osorio

We're busier than ever with longer workdays, less leisure time, shorter lunch hours, longer commutes, and more demands than ever before. We may even be in a job that doesn't fulfill us, yet we spend most of our time there. When the day ends, we have almost no energy left to do what we enjoy. How to find a healthy balance?

Plenty has been written about the therapeutic benefits of exercise. So, why aren't more people reaping those benefits and moving toward health and well-being? We need to reexamine our notion of what exercise and movement are and consider what we're moving toward or away from. Then we can begin to ask ourselves other questions: Not

reoriented our point of view to notice where the opportunities lie? We can begin by simply redefining exercise (with its sometimes negative connotation of obligation) to movement. Already opportunities arise: How do we want to move in our bodies and in our lives? How can we have fun doing that? How can we move more (or maybe less, if we need to slow down)? How does it feel to be still? How can we make time to move into pleasure, to move with pleasure? Already, the notion of movement takes on a more healing expression. Rather than simply being another item on our to do list, it becomes a way for us to examine our lives, to see where we can move toward health, and use physical activity as a way to support this.

Pleasurable movement is motivating, connects you with your body, and comes in many forms.

just are we fit, but are we physically, emotionally, and spiritually healthy? Are we happy? Do we enjoy how we're moving through life? How can we integrate more healing movement into our days?

### Exercise as "Medicine"

We sometimes see more barriers than options to exercise. But what if we

"When most people think of medicine, they visualize something material like a pill to be popped, a liquid to be swallowed, or an injection to be endured," writes Carol Krucoff, author of "Healing Moves: How to Cure, Relieve, and Prevent Common Ailments with Exercise" (Harmony Books, 2000).

"Some might also consider surgery, tests, or procedures ... [But] simple physical activity can have profound healing effects."

Krucoff, who cowrote the book with her husband, Mitchell, a Duke University cardiologist, advocates movement as preventive medicine, saying it's an ideal way to combat the increasing number of inactivity-related health conditions such as heart disease and obesity. This could actually be expanded to include stress-related conditions. In fact, it's often this combination of inactivity and increased stress that wreaks havoc on our immune system, endocrine system, and circulatory system. Every system in our body, in fact, responds to stress and inactivity. But, if this is true, then the inverse is also true: every system in our bodies will also respond to movement and pleasure. To make movement pleasurable and to use it as a way to reconnect with our bodies is, in many ways, the perfect antidote to the cycle of inactivity/hyperactivity and stress. As we move more in this way, we gain energy and health, we feel rejuvenated and relaxed, and we become more physically and emotionally aware.

## Emotional Fitness

We often focus on physical fitness, but any movement toward health must also include emotional and spiritual fitness. Psychologist Nancy Mramor, PhD, author of "Spiritual Fitness" (Llewellyn Publications, 2004), ties emotional fitness with our physical health and with our heart's expression. "There is evidence that the largest number of heart attacks occurs on Monday morning between 8 and 9 a.m.," she says. "This occurrence is related to the experience called joyless striving. It applies to feelings of having to force yourself to go to a job that you have no interest in, or even truly dislike. Clearly these feelings suggest a lack of emotional fitness in the match between the employee and the job." When we're emotionally connected to our work in a healthy way and to one another, we not only survive, we thrive.

## Personal Health

Interpersonal relationships, in fact, are one of the three major causes of life stress, along with environmental events/conditions and personal attitudes and beliefs. In his book, "Love and

Survival" (Harper Collins, 1998), renowned physician Dean Ornish, who first proved that heart disease was reversible through lifestyle changes, says that in order to survive, we need not only care for our lives, but the lives of others. Individuals with supportive relationships get sick less, heal faster, and live longer.

Our health and well-being are not about being hyper-active or inactive. They're about finding a balance, making our actions conscious, and learning to move in ways that are both healthy and appropriate in our own lives, then moving this healing energy out toward others. So, rather than exhausting or limiting our energy, we learn to expand it. Then we can begin exercising in a whole new way--exercising our right to choose and to better understand our body, our life, and what we want to be doing with it.

Begin by checking in with yourself as you're moving through your day: How does your body feel right now? How are you breathing? Where is this movement taking you? Do you feel good? Are you satisfied? Are you happy? If not, then change something. Change how you're moving, where you're moving toward, or look at what you're moving away from.

"Become the change you seek in the world," Mahatma Ghandi said. This isn't about a temporary quick fix to end a bad habit, lose some weight, or fill our time. This is about long-term change--making more conscious use of our time and of our life. It's about moving through life in healthy and healing ways, and expanding our idea of who we can be. Then our view of the world widens, our heart grows, our spirit soars, and our body moves toward true change. This is the healing power of movement.

Enjoyable exercise boosts physical health as well as emotional well being.

# No Pain, No Gain?

## Bodywork Doesn't Have to Hurt to be Effective

Cathy Ulrich

Some people believe massage must be painful to be effective. While some modalities may be intense, this doesn't necessarily translate to a knuckle-biting experience. In fact, painful bodywork can be counterproductive. If you can't breathe comfortably, want to tighten up, make a face, or curl your toes, the technique is too much for you. Your body will go into a protective mode and actually block any positive change.

"No pain, no gain" just doesn't have to apply when it comes to bodywork. Be sure to provide feedback to your practitioner so that you're on the same page. Think of it as a "scale of intensity." On my scale, zero is not touching you and ten is pain--not the worst pain you've ever felt but the place where you want to hold your breath, tighten up, make a face, leave your body. That's a ten.

You shouldn't ever have to be in a pain range to get results, and be sure to let your practitioner know if you're in an eight or nine range. They may stay at

that level if that's where the therapeutic value will be attained, but again, only if it's manageable and you're not tightening up.

And every single client is different. Not only do individuals all start in different places, but their bodies respond differently, and their pain thresholds are extremely varied. What one person finds heavenly, another calls torture.

If it does feel too painful, be sure to tell your therapist. Usually, a practitioner can simply slow down to ease the intensity without losing therapeutic value. Sometimes, if you are nervous or stressed, just remembering to breathe will make your body more open, and you'll remain comfortable.

Bodywork needn't be a test of how tough you are. By giving your therapist appropriate feedback and understanding that painful techniques aren't really helping your body heal, you'll have a great experience in the session and feel better afterward.

Therapeutic massage actually feels good.

# Probiotics for Skin Health

## Trust Your Gut on This One!

Shelley Burns, N.D.

Digestive health plays an important role in how skin appears on the surface. When digestion is not working optimally, it allows toxins to be reabsorbed in the body instead of being eliminated. The body then mounts a state of emergency as it's overwhelmed by toxins, some of them bad bacteria. These manifest directly on the surface for all the world to see, in the form of wrinkles, blotchiness, skin rashes, and acne.

This is where probiotics come into play. Probiotics contain potentially beneficial bacteria found in the digestive tract--what some call good gut bacteria. They help strengthen the digestive system but they also play an important role in skin health. Probiotics consist of

*Lactobacillus acidophilus*, *Lactobacillus bulgaricus*, and *Bifidobacterium bifidum*. They have anti-inflammatory, anti-pathogenic, and antiallergenic properties and can be used prophylactically and therapeutically.

There have been many studies showing benefits of probiotics to skin health. For example, there's a correlation between an imbalance of good and bad bacteria and the onset of acne. When bringing natural bacteria back into balance with a probiotic intervention, acne improves, in some studies, as much as 50 percent of the time.

There is no recommended daily intake for probiotics, but good food sources include buttermilk, kefir, miso,

tempeh, yogurt, and other fermented foods. Supplements are generally higher in potency and are used for therapeutic purposes in treating irritable bowel syndrome, Crohn's disease, colitis, and many other conditions.

While probiotics are essential for healthy skin and digestive health, there are many other appealing benefits to encourage their use, such as strengthening the immune system, replacing good bacteria after a course of antibiotics, and contributing to general health and well-being.

One note: Some probiotic supplements come from dairy sources and may not be suitable for individuals with dairy allergies or sensitivities.

*This I conceive  
to be the  
chemical  
function of  
humor: to  
change the  
character of our  
thought.*

--Lin Yutang

Hello to everyone,  
Fall is coming-yeah! Cooler weather makes everyone happier.

School has started again, schedules change, activities change. Another pace to settle into. Don't stress too much. Just have a massage!

This is also a good time to start exercising if you've been stalling. Christmas is a good goal to look good for. When you start feeling sore, consider taking Arnica, ice the pain spots, drink plenty of water, & come see me to help get thru it all. Stretch - stretch - stretch!

Smile too. The simple act of smiling - the muscles involved - helps your brain to release happy endorphins. So next time you're in a frump, try smiling for a few minutes, & see if you don't feel better!

If you refer someone to me, you can enjoy \$20 off your next massage after I have treated them. Just a small way to say thank you. I appreciate you thinking of me, so save a few \$\$\$. That way we both benefit from your kind action. :-)

Smiles always, Lucy

**FALL SPECIAL:** Buy a 90-minute session & get ear candling for free! And remember, chair or hand/forearm massage is available. I'd be happy to come to your event, or office.
