Holding Headaches at Bay

Bodywork Eases Migraines and Tension Headaches

Cathy Ulrich

"Do you get headaches?" I asked Cindy. She had come to see me for massage to address her neck and shoulder pain but hadn't mentioned headaches.

"Well, yes," she said. "I've always had headaches and, now that you mention it, they seem to be worse when my neck hurts." Cindy went on to say she suffered from them as often as 2-3 times a week and typically treated them with ibuprofen.

Like many Americans, Cindy suffers from chronic, frequent headaches. Her neck pain finally prompted her to seek help, but she was so used to the headaches, she thought they were something she simply had to live with.

MIGRAINES.

Migraine headaches occur when the blood vessels in the brain become dilated, usually due to a chemical reaction, such as food allergies or a stress response. They often start with visual disturbances and quickly develop into severe head pain accompanied by nausea, vomiting, dizziness, and sensitivity to light. They're usually felt on one side of the head, but can be on both sides. Migraines are often managed with medications and avoidance of foods known to trigger them, such as red wine, chocolate, aged cheese, and nuts. However, some bodywork techniques can also be effective in easing migraines or decreasing the frequency of these painful headaches.

Freedom from chronic headaches is an option many Americans don't even realize is possible.

What Cindy didn't understand was that frequent headaches are not normal and, with a little proactive planning, there is something that can be done to manage and even prevent them.

Types of Headaches

Headaches come in many varieties. Following is a short list of the most common types. Tension Headaches.

Exaggerated by stress, tension headaches are related to poor posture, jaw problems (such as temporomandibular joint disorder, or TMJ), and neck pain. Many people describe a headache that starts at the base of the skull and then moves in an arc over the ears and behind

the eyes. Tension headaches are most often caused or exacerbated by poor posture, work station positions, and body mechanics, creating undue stress on the upper neck muscles.

Mixed Headaches.

The term mixed headache is used to describe a tension headache that leads to a migraine. Typically, the tension headache starts first and the chemicals produced from the pain of it create conditions for a migraine to develop. In people with patterns of mixed headaches, the best way to avoid the onset of a migraine is to treat the tension headache.

Bodywork Options

A treatment regimen that includes bodywork, attention to body position, and stress management can help prevent or greatly reduce the frequency of headaches, in turn reducing your reliance on medication and the need to avoid food triggers. There are many different bodywork techniques, each with specific approaches for treating headaches. Following is a short list of techniques often effective in treating recurring headaches.

Swedish Massage.

A tension headache, by its very name, implies the presence of stress and tension. Swedish massage, on the other hand, promotes relaxation and relieves muscle tension. When muscles become tight due to stress or poor posture, they eventually adapt a chronically shortened state. Swedish massage teaches the body how to let go of muscle tension and resets muscle tone.

INTEGRATIVE BODYWORK.

Rolfing, Hellerwork, Structural Integration, and CORE are examples of the types of bodywork designed to posture and structural improve alignment. A primary cause of chronic headaches is poor posture, which produces tension in the neck and shoulders because the weight of the head is not properly balanced on top of the spine. Integrative bodywork can produce lasting postural change for greater ease of movement. By selectively freeing the soft tissues, integrative bodywork literally can change postural alignment and remove the stresses and strains on the muscles that cause headaches.

DEEP TISSUE THERAPIES.

The integrative therapies mentioned above, as well as neuromuscular therapy and myofascial release, use similar techniques to free connective tissue. A chronically tensed muscle tends to maintain that tension, even after the stressful event has passed. Deep tissue techniques free the connective tissue glue, creating a new way for the muscle to function.

Reflexology.

Like acupuncture, reflexology works to move energy blockages in the body. By stimulating points on the feet that correspond to organs in the body, reflexologists can promote relaxation, reduce pain, and restore energy flow. Several scientific studies have shown that reflexology is a viable treatment for migraines, in some cases working as well as, or better than, medication--and without the side effects.

Craniosacral Therapy.

Craniosacral therapy addresses the inherent, gentle, rhythmic movement of the bones in the skull and their effect on the fluid that surrounds, bathes, and cushions the brain and spinal cord and runs throughout the body. Cranial bones move in miniscule amounts as a response to the production and absorption of cranial fluid. With head trauma, whiplash injury, or even severe stress, cranial bone movement can be compromised, resulting in headaches, dizziness, ringing in the ears, or vision disturbances. This therapy restores the normal movement of the cranial bones and fluid.

By addressing the root of the problem, regularly scheduled bodywork sessions can greatly reduce headaches as well as your need for medication. Remember, headaches are not normal, and you don't have to live with them.

Reflexology has proven as, or more, effective than medication--without the many side effects.

Managing Arthritis Exercise and Bodywork Keep Joint Pain at Bay

The word arthritis strikes fear in the hearts of older adults. It often signifies aging, pain, inactivity, and disability. However, new research shows moderate physical exercise can actually ease arthritis symptoms by decreasing pain and increasing a person's likelihood of living a normal life.

Understanding Arthritis

The most common form of arthritis-osteoarthritis, or also known as degenerative arthritis--affects more than twenty million Americans. Osteoarthritis (literally meaning "bone-joint inflammation") is caused by wear and tear on joint surfaces and most frequently involves the hips, knees, lower back, neck, and fingers. More than half of people over sixty-five have some evidence of osteoarthritis on X-rays, although it doesn't always manifest as symptoms.

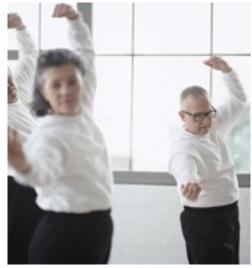

Many problems arise from a sedentary lifestyle. Joints lose flexibility and muscles lose strength, feeding the cycle of pain, inactivity, and more pain.

Exercise Offers Sweet Relief

Vigorous walking, swimming, and bicycling boost the release of powerful endorphins, the body's natural painkillers. When done four to five days a week, these aerobic activities improve general cardiovascular health and aid in weight management (obesity is the single biggest risk factor for osteoarthritis).

Strengthening and stretching exercises targeted at maintaining joint flexibility and muscle strength--especially for at-risk joints--slow the progression of degenerative arthritis. Yoga classes and moderate weight lifting programs are excellent ways to improve strength and flexibility. Bodywork can also provide relief.

If arthritis is slowing you down, get serious with your exercise plan. Consult your physician; work with a professional trainer, physical therapist, yoga instructor, or bodyworker; and start a gentle, progressive exercise program. Your joints will reward you for it, and you'll free yourself from arthritic pain.

Stretching can slow degenerative arthritis.

Yogurt, the Super Food Balance Digestion, Improve Immunity, and Prevent Disease

In some form, yogurt has existed since at least 2000 BCE, and many food historians believe it predates recorded history, possibly going back as far as 9000 BCE Why such staying power? A bit of a wonder food, yogurt improves digestion, which can boost immunity and even help prevent colon cancer. One dairy product even most lactose intolerant people can eat, yogurt is loaded with active bacterial cultures, the key ingredients that make it so healthy.

While we typically think of bacteria as dangerous bugs that cause disease and infection, the body is host to billions of bacteria that live in the intestines and help digest the foods we eat. These good bacteria, or microflora, actually fight off the bad bacteria that cause illness. Some of these same good bacterial species are used to ferment milk, and it's these cultures that give yogurt its texture and tart flavor. They also process much of the milk sugar, called lactose, during fermentation, which is why yogurt usually doesn't bother people with lactose intolerance.

Eating yogurt helps maintain the microflora in the gut, optimizing digestion and keeping harmful bacteria in check. Ever noticed how a course of antibiotics is often followed by a bout of diarrhea? This is because antibiotics kill off all the bacteria in the gut--the bad stuff and the good--leaving the gastrointestinal tract compromised. Fortunately, yogurt can help counteract this imbalance. Furthermore, this food is a good source of nutrients, including B vitamins, calcium, magnesium, and phosphorus. Whole milk yogurt also contains conjugated linoleic acid (CLA), an essential fatty acid with cancer fighting properties, especially beneficial in preventing breast and colon cancers. And CLA has been shown to increase fat metabolism, helping the body convert fat to lean muscle.

Maintaining the good bacteria in the gastrointestinal tract is key to healthy digestion, and eating quality yogurt is a great way to do this. Be sure to read the labels and choose varieties that contain live active cultures to ensure you're getting the most from your yogurt. I only went out for a walk and finally concluded to stay out till sundown, for going out, I found, was really going in.

Hello --

Spring has finally arrived-along with all the many storms and rain (rain - yippeee!). And Springtime gets us out doing more active things again. Activity is a very good thing - healthy, fun, & getting your body moving after the long winter hibernation. That usually involves pain the (at least for most of us!). Don't let those body aches & pains slow down your quest for fun and things to do. Getting bodywork & massage can save you a lot of grief too. Stretching often gets forgotten, but can also make a big difference in how you feel. Remember when you're planning all these 'fun' activities, to include massage as part of your survival kit. Schedule it in just like you would a softball game. Keep your muscles happy, & you will be too. Exercise doesn't have to be an activity of torture, as long as you remember to treat your body with kindness & care. Your body structure needs regular tune-ups too, just like your car does. So, come see me and lets get you in proper condition to

have fun & stay active. I'll look forward to seeing you again soon! Sincerely, Lucy :-)
